HOUSE BILL 93

**57TH LEGISLATURE - STATE OF NEW MEXICO - FIRST SESSION, 2025**

INTRODUCED BY

Kristina Ortez

AN ACT

RELATING TO UTILITIES; PROVIDING FOR THE FILING OF ADVANCED GRID TECHNOLOGY PLANS BY PUBLIC UTILITIES TO THE PUBLIC REGULATION COMMISSION; PROVIDING FOR COST RECOVERY THROUGH TARIFF RIDERS OR BASE RATES; INCLUDING ADVANCED GRID TECHNOLOGIES IN UTILITY INTEGRATED RESOURCE PLANS AND THE ANNUAL REPORTS OF DISTRIBUTION COOPERATIVE UTILITIES.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF NEW MEXICO:

SECTION 1. A new section of Chapter 62, Article 9 NMSA 1978 is enacted to read:

"[NEW MATERIAL] ADVANCED GRID TECHNOLOGY PLANS--ADVANCED GRID TECHNOLOGY PROJECTS--COST RECOVERY MECHANISM-- DEFINITIONS.--

A. A public utility shall file an advanced grid technology plan along with and in the same cadence as the

underscoring material = new  
~~[bracketed material] = delete~~

underscored material = new  
~~[bracketed material] = delete~~

1 utility files its integrated resource plan. A public utility  
2 may choose to file an advanced grid technology plan in advance  
3 of its next integrated resource plan. An advanced grid  
4 technology plan shall include the following related to the  
5 public utility's transmission system:

6 (1) a discussion of transmission-line  
7 congestion frequency and identification of congestion points;

8 (2) an implementation plan for using advanced  
9 grid technologies to alleviate congestion points, including a  
10 cost-effectiveness analysis;

11 (3) identification of specific projects that  
12 the utility intends to implement during the three-year plan  
13 period;

14 (4) the utility's cost estimates for each  
15 project; and

16 (5) any other information requested by the  
17 commission.

18 B. Projects are not exempt from the requirements of  
19 and applications shall be filed pursuant to Sections 62-9-1 and  
20 62-9-3 NMSA 1978, as applicable.

21 C. When considering advanced grid technology plans  
22 for approval, the commission shall review the reasonableness of  
23 the projects proposed and whether the investments, programs and  
24 expenditures of the plan would:

25 (1) reduce costs to ratepayers by avoiding or

.229066.2

1 deferring the need for investment in new generation or  
2 transmission, including new rights of way;

3 (2) assist with ensuring grid reliability,  
4 including transmission and distribution system stability, while  
5 integrating sources of renewable energy into the grid;

6 (3) support the diversification of energy  
7 resources and enhance grid security;

8 (4) reduce greenhouse gases and other air  
9 pollutants resulting from power generation, as required by the  
10 energy standards established pursuant to Section 62-16-4 NMSA  
11 1978;

12 (5) be reasonably expected to increase access  
13 to and the use of clean and renewable energy, with  
14 consideration given for increasing access for low-income users  
15 and users in underserved communities;

16 (6) be consistent with the state's grid  
17 modernization planning and priorities; and

18 (7) be the most cost effective among feasible  
19 alternatives.

20 D. Except as provided in Subsections F and G of  
21 this section, a public utility that undertakes a project of a  
22 commission-approved advanced grid technology plan may recover  
23 the utility's reasonable costs through an approved tariff rider  
24 or through base rates, or a combination of the two. Costs  
25 incurred by a utility to complete a project in a commission-

.229066.2

underscored material = new  
~~[bracketed material] = delete~~

1 approved advanced grid technology plan shall be presumed  
2 reasonable up to the maximum cost amount approved by the  
3 commission.

4 E. Prior to imposing a tariff rider pursuant to  
5 Subsection D of this section, a public utility shall propose  
6 the tariff rider to the commission for approval. A proposed  
7 tariff rider shall go into effect thirty days after filing and  
8 be deemed approved as a matter of law, unless within that  
9 thirty-day period the commission rejects the tariff rider or  
10 suspends the tariff rider for a period not to exceed one  
11 hundred eighty days. If the commission does not approve or  
12 disapprove a suspended tariff rider by the end of the one-  
13 hundred-eighty-day suspension period, the tariff rider shall be  
14 deemed approved as a matter of law.

15 F. The commission shall only allow a utility to  
16 recover costs associated with an advanced grid technology plan  
17 or project to the extent that the cost recovery is not under  
18 the jurisdiction of the federal energy regulatory commission.

19 G. The provisions of this section do not apply to a  
20 distribution cooperative organized pursuant to the Rural  
21 Electric Cooperative Act.

22 H. As used in this section, "project" means a  
23 project in a utility's advanced grid technology plan filed  
24 pursuant to this section."

25 SECTION 2. A new section of Chapter 62, Article 9 NMSA

.229066.2

underscoring material = new  
~~[bracketed material] = delete~~

1 1978 is enacted to read:

2 "[NEW MATERIAL] DEFINITIONS.--As used in Chapter 62,  
3 Article 9 NMSA 1978:

4 A. "advanced conductor" means a conductor that has  
5 a direct current electrical resistance at least ten percent  
6 lower than existing conductors of a similar diameter while  
7 simultaneously increasing capacity on a utility's system by at  
8 least seventy-five percent and includes, in a project,  
9 rebuilding support structures or other associated  
10 facilities;

11 B. "advanced grid technology" means hardware or  
12 software technology that increases the efficiency, capacity or  
13 reliability of existing or new electric transmission and  
14 distribution systems and includes advanced conductors, grid  
15 enhancing technology and technology determined by the public  
16 regulation commission or the federal energy regulation  
17 commission to increase the efficiency, capacity or reliability  
18 of an existing or new transmission facility;

19 C. "advanced power flow controllers" means hardware  
20 or software technology used to push or pull electric power in a  
21 manner that balances overloaded lines and underused corridors  
22 within a distribution or transmission system;

23 D. "dynamic line ratings" means hardware or  
24 software technology used to appropriately update the calculated  
25 thermal limits of existing distribution or transmission lines

.229066.2

underscoring material = new  
[bracketed material] = delete

1 based on real-time and forecasted weather conditions;

2 E. "grid enhancing technology" means hardware or  
3 software technology that reduces congestion or enhances the  
4 flexibility of electric transmission and distribution systems  
5 by increasing the capacity of a line or rerouting electricity  
6 from overloaded to uncongested lines while maintaining industry  
7 safety standards and includes dynamic line ratings, advanced  
8 power flow controllers and topology optimization; and

9 F. "topology optimization" means hardware or  
10 software technology that identifies reconfigurations of the  
11 distribution or transmission grid and can enable the routing of  
12 power flows around congested or overloaded distribution or  
13 transmission elements."

14 SECTION 3. Section 62-17-4 NMSA 1978 (being Laws 2005,  
15 Chapter 341, Section 4, as amended) is amended to read:

16 "62-17-4. DEFINITIONS.--As used in the Efficient Use of  
17 Energy Act:

18 A. "achievable" means those energy efficiency or  
19 load management resources available to the utility using its  
20 best efforts;

21 B. "advanced conductor" means a conductor that has  
22 a direct current electrical resistance at least ten percent  
23 lower than existing conductors of a similar diameter while  
24 simultaneously increasing capacity on a utility's system by at  
25 least seventy-five percent;

.229066.2

underscored material = new  
[bracketed material] = delete

1           C. "advanced grid technology" means hardware or  
2 software technology that increases the efficiency, capacity or  
3 reliability of existing or new electric transmission and  
4 distribution systems and includes advanced conductors, grid  
5 enhancing technology and technology determined by the public  
6 regulation commission or the federal energy regulation  
7 commission to increase the efficiency, capacity or reliability  
8 of an existing or new transmission facility;

9           D. "advanced power flow controllers" means hardware  
10 or software technology used to push or pull electric power in a  
11 manner that balances overloaded lines and underused corridors  
12 within a distribution or transmission system;

13           ~~[B.]~~ E. "commission" means the public regulation  
14 commission;

15           ~~[G.]~~ F. "cost-effective" means that the energy  
16 efficiency or load management program meets the utility cost  
17 test;

18           ~~[D.]~~ G. "customer" means a utility customer at a  
19 single, contiguous field, location or facility, regardless of  
20 the number of meters at that field, location or facility;

21           ~~[E.]~~ H. "distribution cooperative utility" means a  
22 utility with distribution facilities organized as a rural  
23 electric cooperative pursuant to Laws 1937, Chapter 100 or the  
24 Rural Electric Cooperative Act or similarly organized in other  
25 states;

.229066.2

underscoring material = new  
~~[bracketed material] = delete~~

1           I. "dynamic line ratings" means hardware or  
2           software technology used to appropriately update the calculated  
3           thermal limits of existing distribution or transmission lines  
4           based on real-time and forecasted weather conditions;

5           ~~[F.]~~ J. "energy efficiency" means measures,  
6           including energy conservation measures, or programs that target  
7           consumer behavior, equipment or devices to result in a decrease  
8           in consumption of electricity and natural gas without reducing  
9           the amount or quality of energy services;

10           K. "grid enhancing technology" means hardware or  
11           software technology that reduces congestion or enhances the  
12           flexibility of electric transmission and distribution systems  
13           by increasing the capacity of a line or rerouting electricity  
14           from overloaded to uncongested lines while maintaining industry  
15           safety standards and includes dynamic line ratings, advanced  
16           power flow controllers and topology optimization;

17           ~~[G.]~~ L. "large customer" means a customer with  
18           electricity consumption greater than seven thousand megawatt-  
19           hours per year or natural gas use greater than three hundred  
20           sixty thousand decatherms per year;

21           ~~[H.]~~ M. "load management" means measures or  
22           programs that target equipment or devices to result in  
23           decreased peak electricity demand or shift demand from peak to  
24           off-peak periods;

25           ~~[I.]~~ N. "program costs" means the prudent and

.229066.2

underscored material = new  
[bracketed material] = delete

1 reasonable costs of developing and implementing energy  
2 efficiency and load management programs, but "program costs"  
3 does not include charges for incentives or the removal of  
4 regulatory disincentives;

5 ~~[J-]~~ O. "public utility" means a public utility  
6 that is not also a distribution cooperative utility; ~~[and]~~

7 P. "topology optimization" means hardware or  
8 software technology that identifies reconfigurations of the  
9 distribution or transmission grid and can enable the routing of  
10 power flows around congested or overloaded distribution or  
11 transmission elements; and

12 ~~[K-]~~ Q. "utility cost test" means a standard that  
13 is met if the monetary costs that are borne by the public  
14 utility and that are incurred to develop, acquire and operate  
15 energy efficiency or load management resources on a life-cycle  
16 basis are less than the avoided monetary costs associated with  
17 developing, acquiring and operating the associated supply-side  
18 resources."

19 SECTION 4. Section 62-17-10 NMSA 1978 (being Laws 2005,  
20 Chapter 341, Section 10) is amended to read:

21 "62-17-10. INTEGRATED RESOURCE PLANNING.--Pursuant to the  
22 commission's rulemaking authority, public utilities supplying  
23 electric or natural gas service to customers shall periodically  
24 file an integrated resource plan with the commission. Utility  
25 integrated resource plans shall evaluate renewable energy,

.229066.2

underscored material = new  
~~[bracketed material] = delete~~

1 energy efficiency, load management, distributed generation,  
2 advanced grid technologies and conventional supply-side  
3 resources on a consistent and comparable basis and take into  
4 consideration risk and uncertainty of fuel supply, price  
5 volatility and costs of anticipated environmental regulations  
6 in order to identify the most cost-effective portfolio of  
7 resources to supply the energy needs of customers. The  
8 preparation of resource plans shall incorporate a public  
9 advisory process. Nothing in this section shall prohibit  
10 public utilities from implementing cost-effective energy  
11 efficiency and load management programs and the commission from  
12 approving public utility expenditures on energy efficiency  
13 programs and load management programs prior to the commission  
14 establishing rules and guidelines for integrated resource  
15 planning. The commission may exempt public utilities with  
16 fewer than five thousand customers and distribution-only public  
17 utilities from the requirements of this section. The  
18 commission shall take into account a public utility's resource  
19 planning requirements in other states and shall authorize  
20 utilities that operate in multiple states to implement plans  
21 that coordinate the applicable state resource planning  
22 requirements. The requirements of this section shall take  
23 effect one year following the commission's adoption of rules  
24 implementing the provisions of this section."

25 SECTION 5. Section 62-17-11 NMSA 1978 (being Laws 2005,

.229066.2

underscoring material = new  
[bracketed material] = delete

1 Chapter 341, Section 11, as amended) is amended to read:

2 "62-17-11. DISTRIBUTION COOPERATIVE UTILITIES.--

3 A. Distribution cooperative utilities shall  
4 periodically examine the potential to assist their customers in  
5 reducing energy consumption or peak electricity demand in a  
6 cost-effective manner. Based on these studies, by January 1,  
7 2009, distribution cooperative utilities shall establish energy  
8 efficiency and load management targets and begin to implement  
9 cost-effective energy efficiency and load management programs  
10 that are economically feasible and practical for their members  
11 and customers. Approval for such programs shall reside with  
12 the governing body of each distribution cooperative utility and  
13 not with the commission.

14 B. Each distribution cooperative utility shall file  
15 with the commission, concurrently with its annual report, a  
16 report that describes all of the distribution cooperative  
17 utility's programs or measures that promote energy efficiency,  
18 conservation or load management, including the deployment of  
19 advanced grid technologies. The report shall set forth the  
20 costs of each of the programs or measures for the previous  
21 calendar year and the resulting effect on the consumption of  
22 electricity. In offering or implementing energy efficiency,  
23 conservation or load management programs, a distribution  
24 cooperative utility shall attempt to minimize any cross-  
25 subsidies between customer classes.

.229066.2

underscored material = new  
[bracketed material] = delete

1 C. Each distribution cooperative utility shall  
2 include in the report required by Subsection B of this section  
3 a description of all programs or measures to promote energy  
4 efficiency, conservation or load management, including the  
5 deployment of advanced grid technologies, that are planned and  
6 the anticipated date for implementation.

7 D. Costs resulting from programs or measures to  
8 promote energy efficiency, conservation or load management,  
9 including the deployment of advanced grid technologies, may be  
10 recovered by the distribution cooperative utility through its  
11 general rates. In requesting approval to recover such costs in  
12 general rates, the distribution cooperative utility may elect  
13 to use the procedure set forth in Subsection [G] H of Section  
14 62-8-7 NMSA 1978."

15 SECTION 6. EFFECTIVE DATE.--The effective date of the  
16 provisions of this act is July 1, 2025.
