SUMMARY

Synopsis of Bill

Senate Bill 121 proposes exempting federally taxable social security retirement income from state personal income tax. Individuals claiming this exemption are not permitted to simultaneously claim the over 65 or blind income tax exemption of Section 7-2-5.2 NMSA 1978.

The effective date of this bill is not stated, and assumed to be 90 days after the end of the session. The provisions of the act are applicable to taxable years beginning January 1, 2022. There is no delayed repeal date but LFC recommends adding one.

FISCAL IMPLICATIONS

To estimate the impact of the proposed legislation of exempting Social Security income from income taxation, the Taxation and Revenue Department (TRD) utilized data from the Individual Master File/Individual Return Transaction File (IMF/IRTF) extracts received from the Internal Revenue Service (IRS) for tax years 2018 and 2019.

To scale the impact of this exemption to tax year 2022 and into the forecast horizon of this bill analysis, TRD utilized a combination of a) the growth in Social Security outlays forecasted by the Congressional Budget Office (CBO)¹, b) the growth rate of the population 65 years and older in New Mexico relative to the United States², and c) the cost-of-living-adjustment (COLA) to Social Security and Supplemental Security Income (SSI) benefits for calendar year 2022^{3,4}.

The estimate is based on the taxpayer population in IRS data who filed a New Mexico personal income tax (PIT) return. This population was further filtered to only include those with taxable social security benefits that were either R-filers or B-filers⁵ and who were either residents, first-year residents or part-time residents in New Mexico. Non-resident B-filers do not allocate any of their pension/annuity/social security benefit income to New Mexico and hence were excluded. It was further assumed that taxpayers would select either this new exemption or the exemption pursuant to Section 7-2-5.2 NMSA 1978, depending on which decreased their tax liability the most. The fiscal impact also accounts for the higher top personal income tax (PIT) rate that is effective beginning tax year 2021.

In general, estimating the cost of tax expenditures is difficult. Confidentiality requirements surrounding certain taxpayer information create uncertainty, and analysts must frequently interpret third-party data sources. In this case, the amount of taxable social security is not reported directly to TRD. If this bill passes and is implemented, the annual cost cannot be determined exactly, because the federally taxable social security amount will be reported to TRD as an exemption and not a credit. TRD will have to recalculate all returns claiming this exemption.

This bill creates a tax expenditure with a cost that is somewhat difficult to determine because the data on which the model is based are indirect. LFC has concerns about the risk to state revenues from tax expenditures and the increase in revenue volatility from erosion of the revenue base. This bill may be counter to the LFC tax policy principle of adequacy, efficiency, and equity. Due

⁴ 2022 COLA adjustment at 5.9% was significantly higher than the average in the last five years of 1.6%. An adjustment was, therefore made to CBO's projected outlays to account for this higher than expected adjustment as well as to account for the current high inflationary expectations in FY2022 and FY2023.

⁵'R' filers file based on the rate tables. 'B' filers file a PIT-B for New Mexico allocation and apportionment of income.

to the increasing cost of tax expenditures, revenues may be insufficient to cover growing recurring appropriations.

SIGNIFICANT ISSUES

States that tax social security benefits broadly fall into four categories: (1) states that fully exempt social security benefits from their state income tax; (2) states that tax social security benefits the same way in which the federal government taxes them; (3) states that base benefit exemptions on certain factors such as age or income; and (4) states that do not tax income at all. Twelve states tax social security benefits to some extent (see Attachment A). New Mexico is one of two states that follow the federal rules for including a portion of social security benefits as part of taxable income, and the state also provides a deduction for persons over age 65 to help offset the tax on social security benefits.

At the federal level, if the taxpayer's adjusted gross income (AGI) including half of social security benefits totals less than \$32 thousand for married couples filing jointly or \$25 thousand for single filers, none of the benefit amount is included in gross income. Accordingly, none of it is subject to federal income tax or state income tax. For AGI including half of social security benefits that exceeds \$44 thousand for married joint and \$34 thousand for single, then 50 percent to 85 percent of social security income is taxable.

The Aging and Long-Term Services Department (ALTSD) points out that seniors with adjusted gross income levels less than two to three times the poverty standard, do not pay taxes and will see no impact from this bill. Three times the poverty standard for 2022 is \$38,640 for one person, \$52,260 for two. However, seniors and adults with disabilities who receive social security and have additional income sources, putting them into a taxable income bracket, will be affected by this bill.

See the *Other Significant Issues* section of this FIR for additional discussion.

PERFORMANCE IMPLICATIONS

LFC's tax policy of accountability is not met since TRD is not required in the bill to report annually to an interim legislative committee regarding the data compiled from the reports from taxpayers taking the exemption and other information to determine whether the exemption is meeting its purpose.

ADMINISTRATIVE IMPLICATIONS

TRD will need to make information system changes and create new publications, forms, and regulations. These changes will be incorporated into annual tax year implementation and represents \$5,164 in workload costs.

TECHNICAL ISSUES

This bill does not contain a delayed repeal date. LFC recommends adding a delayed repeal date.

OTHER SIGNIFICANT ISSUES

New Mexico began taxing social security benefits in 1990. The action was contained in an omnibus bill enacted in response to the “Davis v. Michigan” and “Burns v. New Mexico” problems. At that time, state retiree’s pensions were 100 percent exempt from personal income tax, but federal retirees only were allowed a \$3,000 deduction. The Supreme Court of the United States found that this differential treatment was in violation of federal law ensuring that state and federal workers must be treated equally and equitably. Per the Supreme Court opinion, retiree income was covered by the federal statute. In the relevant bill, New Mexico repealed both the federal and state differential deductions. In addition, other source-specific deductions were included in the fix. These included the total exemption for social security income.

An individual who is 65 years or older or who is blind may claim an exemption from PIT based on a sliding scale, not to exceed \$8,000. This exemption is modest and cost the state \$1.9 million in fiscal year 2021, with 105,436 claims, according to the most recent TRD Tax Expenditure Report. The current benefit amounts and bracket levels were established in 1987 and have not been adjusted since. Updating both the levels and the brackets by only 50 percent would cost the general fund approximately \$15 million and would target the benefits to lower-income elderly and blind individuals.

PIT represents a consistent source of revenue for many states. While this revenue source is susceptible to economic downturns, it is also positively responsive to economic expansions. New Mexico is one of 42 states along with the District of Columbia that impose a broad-based PIT. PIT is an important tax policy tool that has the potential to further both horizontal equity by ensuring the same statutes apply to all taxpayers and vertical equity by ensuring the tax burden is based on taxpayer’s ability to pay.

New Mexico statutes for state personal income tax are linked to the federal tax code. This is also termed “conformity.” As the federal tax code changes, such as under the 2017 Tax Cuts and Jobs Act (TCJA), states see impacts on their revenue collection from PIT, depending on their level of conformity. New Mexico’s level of conformity is currently high, given that PIT starts with federal adjusted gross income (AGI), applies federal standard deductions, and uses Internal Revenue Service (IRS) definitions such as the definition for “dependents”. With that conformity, New Mexico’s treatment of social security benefits follows the federal application.

Since 1984, a portion of Social Security benefits have been subject to federal income taxes. The taxable portion is dependent on the level of the taxpayer’s combined income, which includes 50 percent of the Social Security benefits, plus income from other sources, including interest on tax exempt bonds. Because the combined income thresholds for taxation of benefits have remained unchanged since they were introduced in 1984 and 1993, but wages have increased over the years, the proportion of beneficiaries paying tax on their benefits has risen over time.

New Mexico’s taxable PIT base for social security benefits is reasonably stable, and a major portion of social security income is earned by relatively high-income individuals who do not depend solely on social security benefits for their income, and who have other sources of income as well. This is illustrated in Graph 1: 87 percent of taxable social security benefits are earned by individuals with AGI over \$50 thousand. In contrast, Graph 2 above illustrates that taxpayers with AGI over \$50 thousand represent only 63 percent of all taxpayers receiving social security benefits. While any taxpayer with social security benefits may apply for this exemption, most of the financial benefit of this credit will be realized by higher earning individuals as indicated in Graph 1 above.

Twelve states, including New Mexico, tax some portion of social security benefit income. However, those 12 states tend to have a higher threshold at which PIT takes effect. This essentially means that low income individuals’ income tax liability is generally lower in the benefits-taxing states, regardless of the source of their income. Graph 3 below compares the income level at which each state’s initial income tax rate takes effect for a married couple. New Mexico, along with four other states that tax social security benefits, has the third highest income level (\$24,800) at which a couple’s income may begin to be taxed. At the other end, while Pennsylvania does not tax social security benefits, its income tax is applicable to most non-zero income.

New Mexico’s current PIT exemption for persons 65 and older or blind is targeted at those with lower AGI. An individual claiming exemption under this proposal will no longer be eligible to claim the current exemption for persons 65 and older or blind. Low-income taxpayers tend to have lower taxable social security benefits included in their federal AGI due to federal tax statutes. At the state level, these same taxpayers are eligible for other credits and rebates such as the low-income comprehensive tax rebate (LICTR), leaving them with little or no tax liability under current law.

Excluding types of retirement income from the taxable base is seen as eroding horizontal equity in state income taxes. However, by excluding income based on age, taxpayers in similar economic circumstances are no longer treated equally, with older taxpayers receiving a benefit not available to younger taxpayers at the same level of income.

Taxing social security benefits raises issues of double taxation because employee payroll tax contributions to social security are not deductible from the employee’s income when determining their tax liability in the year the contribution is made. So, employee contributions are taxed, and it is argued that taxing social security benefits when they are paid out will entail taxing the same contribution again. However, social security benefits are a result of not just employee contributions, but also employer contributions. Employer contributions are deductible for the employer in the year the contribution is made. So, employer contributions are not taxed.

Because employees pay half of the payroll tax, and their payroll tax contributions were already included in taxable income for earlier years, at most 50 percent of the benefits should be excluded from future taxation. Social security benefits withdrawals for most workers, however, exceed their lifetime contribution. Goss (1993) estimated that the payroll tax contributions of current and future workers would equal less than 15 percent of the present value of their lifetime benefits⁶. Therefore, if the ratio of lifetime contributions to benefits is less than 15 percent, then up to 85 percent of benefit income can be taxed without risk of double taxation.

Reducing or eliminating income tax on social security benefits is often viewed as a mechanism for attracting or retaining retirees in the state. A 2018 publication by New Mexico State University included the following discussion:⁷

“Because New Mexico is listed as one of the “10 Least Tax Friendly” states for retirees (Kiplinger, 2017), additional research should be conducted on the impacts of reducing or eliminating taxes on retirement. However, it should be noted that while tax friendliness is often listed as a top criteria on “best places to retire” lists, other research has shown that tax policy changes have done nothing to attract retirees (Conway and Rork, 2012).”

Other factors – such as weather, cost of living (particularly cost of housing), and the location of family members – also affect migration decisions for retirees. A 2001 study published in the *National Tax Journal* found that, “in addition to cost-of-living and climate considerations, the elderly are attracted to states that exempt food from sales taxes and spend less on welfare. Low

https://aces.nmsu.edu/pubs/_circulars/CR691.pdf

personal income and death taxes also encourage migration, depending on how these states taxes are measured.”⁸

ALTSD points out that New Mexico seniors are facing substantial financial obstacles and 13.5 percent of adults ages 65 years and older live below the poverty level, the second highest in the nation.⁹ Rates of poverty varied from 5.5 percent in Los Alamos County to 24.1 percent in McKinley County. In addition, those seniors and adults with disabilities who live in assisted living facilities may be potentially impacted by this bill, as approximately 75 percent of assisted living residents pay for their stay with private funds.¹⁰ According to the State of Senior Hunger in America 2019 Annual Report, 12.4 percent of New Mexicans 60 years and older experience food insecurity, the 2nd highest rate in the United States. The Aging & Disability Resource Center (ADRC) serves older adults, people with disabilities, and their caregivers, regardless of income. The social security tax exemption would benefit some of the population that the ADRC serves.

New Mexico is also projected to have amongst the highest population over the age of 65 by the year 2030. TRD notes that even seniors with higher incomes who receive the bulk of the benefits of the exemption are more likely to spend their money, leading to increased economic activity, increased gross receipts for those serving that population, and consequently higher tax revenues for both the state and local governments. Retirees are more likely to spend their money, and to have more discretionary income, as they are no longer saving for their retirement, and indeed are often required to begin taking social security benefits or distributions from retirement plans. Any additional discretionary income they receive as a result of tax cuts, except for the very highest income individuals, are more likely to be spent. Due in part to the change to destination sourcing rules, the impact of increased spending by seniors living in New Mexico will be felt in the communities where those seniors live.

TRD also notes that studies have shown that seniors contribute to their communities in multiple significant ways. Seniors often contribute more than other groups through volunteer work. Many seek additional sources of income, and therefore perform part-time work that would not be done by non-retired individuals who need the income that full-time work provides. Especially at times such as now, where businesses struggle to find workers to fill jobs, and when unemployment is historically low, having a skilled senior population benefits businesses and the overall economy. Senior also often provide family support, attending for instance to some child-care or home-care responsibilities that working adults cannot perform, or lack adequate time to perform. Again, this factor is especially relevant today, when more adults are forced to work from home, when schools are still teaching remotely, and when daycare options have become more limited. Many grandparents care for grandchildren, or at least share in childcare responsibilities. Communities can therefore benefit both economically and socially from having a large senior presence.

There are many other reasons why states may exempt some income for those over 65, such as lessening the economic burdens for individuals on fixed incomes and trying to attract retirees to the state. As Graphs 1 through 3 illustrate though, the consideration of exempting social security

⁸ Houtenville, Andrew & Conway, Karen. (2001). *Elderly Migration and State Fiscal Policy: Evidence from the 1990 Census Migration Flows*. National Tax Journal. 54. 10.17310/ntj.2001.1.05.

⁹ U.S. Census Bureau’s 2019 American Community Survey

¹⁰ <https://www.nmhca.org/faq-facts/>

and eroding horizontal equity must be placed in context of the federal and state tax structure, in its entirety.

As far as attracting more retirees to the state is concerned, exempting social security from income taxation may not necessarily help in achieving that goal. For example, Texas does not tax any income, social security or otherwise, at all. Yet, the state features as one of the least tax friendly states for retirees in the country because of its high property and sales taxes¹¹. Notably, New Mexico’s property taxes are among the lowest in the nation. It is, therefore, necessary to take a holistic look at New Mexico’s tax code, and attempts should be made to make the tax structure more simple, broad based, and equitable, without being punitive to any segment of the population.

ALTERNATIVES

If the intent of the bill is to provide support for lower income earners with social security benefits, a more targeted approach may be to expand the existing exemptions for persons aged 65 and older (Section 7-2-5.2 NMSA 1978) or for low- and middle-income taxpayers (Section 7-2-5.8 NMSA 1978).

Does the bill meet the Legislative Finance Committee tax policy principles?

1. **Adequacy:** Revenue should be adequate to fund needed government services.
2. **Efficiency:** Tax base should be as broad as possible and avoid excess reliance on one tax.
3. **Equity:** Different taxpayers should be treated fairly.
4. **Simplicity:** Collection should be simple and easily understood.
5. **Accountability:** Preferences should be easy to monitor and evaluate.

Does the bill meet the Legislative Finance Committee tax expenditure policy principles?

1. **Vetted:** The proposed new or expanded tax expenditure was vetted through interim legislative committees, such as LFC and the Revenue Stabilization and Tax Policy Committee, to review fiscal, legal, and general policy parameters.
2. **Targeted:** The tax expenditure has a clearly stated purpose, long-term goals, and measurable annual targets designed to mark progress toward the goals.
3. **Transparent:** The tax expenditure requires at least annual reporting by the recipients, the Taxation and Revenue Department, and other relevant agencies.
4. **Accountable:** The required reporting allows for analysis by members of the public to determine progress toward annual targets and determination of effectiveness and efficiency. The tax expenditure is set to expire unless legislative action is taken to review the tax expenditure and extend the expiration date.
5. **Effective:** The tax expenditure fulfills the stated purpose. If the tax expenditure is designed to alter behavior – for example, economic development incentives intended to increase economic growth – there are indicators the recipients would not have performed the desired actions “but for” the existence of the tax expenditure.
6. **Efficient:** The tax expenditure is the most cost-effective way to achieve the desired results.

1. State Taxation of Social Security Benefits

JF/acv

ATTACHMENT A

State Taxation of Social Security Benefits	
Colorado	For beneficiaries younger than 65, up to \$20,000 of Social Security benefits can be excluded, along with other retirement income. Those 65 and older can exclude benefits and other retirement income up to \$24,000. Starting with the 2022 tax year, residents will be able to deduct all federally taxable Social Security benefits from their state income, part of a tax-code overhaul that Colorado lawmakers enacted in June 2021.
Connecticut	Social Security is exempt for individual taxpayers with federal adjusted gross income of less than \$75,000 and for married taxpayers filing jointly with federal AGI of less than \$100,000.
Kansas	Social Security benefits are exempt from Kansas income tax for residents with a federal adjusted gross income of \$75,000 or less.
Minnesota	Social Security income is taxable, but a graduated system of Social Security subtractions apply if someone’s provisional income is below \$81,180 for a single filer or \$103,930 for joint filers.
Missouri	Social Security benefits are not taxed for single taxpayers with adjusted gross income of less than \$85,000 and married couples with AGI of less than \$100,000. Taxpayers who exceed those income limits may qualify for a partial exemption on their benefits.
Montana	Social Security benefits are taxable. The taxable amount may be different from the federally taxable amount because Montana taxes some types of income that the federal government does not, and vice versa.
Nebraska	A taxpayer may subtract Social Security income included in federal adjusted gross income if a taxpayer’s federal adjusted gross income is less than or equal to \$58,000 for married couples filing jointly, or \$43,000 for all other filers. Nebraska is phasing out taxation of benefits starting in the 2021 tax year when beneficiaries saw a 5 percent cut in taxes on their Social Security. The reduction will grow in steps to 50 percent by 2025, at which point state lawmakers will vote on whether to eliminate the tax on benefits altogether by 2030.
New Mexico	Benefits are taxed to the same extent as on the federal tax return. But Social Security income can be included as part of an overall retirement-income exemption of up to \$8,000 per person, subject to income restrictions.
Rhode Island	Rhode Island doesn’t tax Social Security benefits for single filers with up to \$81,900 in adjusted gross income and joint filers with up to \$102,400 in AGI.
Utah	Social Security benefits are taxed, but the state uses tax credits to eliminate liability for beneficiaries with less than \$30,000 (single filers) or \$50,000 (joint filers), with credits phasing out at 2.5 cents for each dollar above these thresholds.
Vermont	Vermont provides a graduated system of Social Security exemptions which kick in if a taxpayer’s income is below \$34,000 (single filer) or \$44,000 (filing jointly)
West Virginia	West Virginia passed a law in 2019 to begin phasing out taxes on Social Security for those with incomes not exceeding \$50,000 (single filers) or \$100,000 (married filing jointly). Beginning in tax year 2020, the state exempted 35 percent of benefits for qualifying taxpayers. As of 2021, that amount increased to 65 percent, and in 2022, the benefits will be completely exempt for those taxpayers.
