## SUMMARY

### Synopsis of House Bill 90

House Bill 90 (HB90) creates the Veterinary Medical Loan Repayment Act. The Act directs the Higher Education Department (HED) to establish a loan repayment program for licensed veterinarians in underserved areas of the state as well as creating the nonreverting veterinary

medical loan repayment fund.

HB90 appropriates \$5 million from the general fund to the veterinary medical loan repayment fund to provide loan repayment for qualified individuals between fiscal year 26 and fiscal year 31.

Eligibility criteria for loan repayment state that applicants shall be:

1. A citizen or lawful permanent resident of the United States;
2. A resident of New Mexico;
3. Licensed as a veterinarian in New Mexico;
4. Employed full-time in a private practice providing food-animal veterinary medical services in a designated underserved area.

Qualified applicants may be eligible for a total award of up to \$80 thousand over four years with a maximum award of up to \$15 thousand per year for the first and second year of participation and up to \$25 thousand for the second and third year of participation. The bill states that award amounts shall not exceed the total veterinary medical education indebtedness of the recipient and HED shall adopt rules to implement the provisions of the Act.

Awards will be made to qualified applicants by a selection committee composed of the state veterinarian, the New Mexico State University extension veterinarian, and the chair of the Board of Veterinary Medicine.

This bill does not contain an effective date and, as a result, would go into effect 90 days after the Legislature adjourns if enacted, or June 20, 2025.

## **FISCAL IMPLICATIONS**

The appropriation of \$5 million contained in this bill is a nonrecurring expense to the general fund. Although this bill does not specify future appropriations, multiyear appropriations, particularly if used to fund services and those services perform well, create an expectation the program will continue in future fiscal years; therefore, this cost could become recurring after the funding period.

HED anticipates needing an additional full-time employee to administer the program and estimates the cost of filling the position to be \$98.5 thousand per year for salary and benefits as reflected in the estimated additional operating budget impact table.

The New Mexico Board of Veterinary Medicine (NMBVM) reports the requirement for the board to maintain a database of employment opportunities in designated underserved areas would require an additional staff person and other costs totaling \$175 thousand to \$200 thousand per year. The bill has no appropriation for this purpose and would require NMBVM to absorb any additional costs in the existing operating budget. NMBVM notes that additional veterinarians paying licensing fees could raise \$600 per new licensee.

## **SIGNIFICANT ISSUES**

With a maximum award of \$80 thousand per awardee, the \$5 million appropriation could support

62 awards, though this number may increase if the award amounts are less than the maximum.

NMDA reports:

Veterinarians contribute to our state’s underserved economy, a resilient food supply chain, and help agricultural producers access more and better markets. Their services are vital to keeping our food system safe and protecting public health. According to the 2023 New Mexico Agricultural Statistics Bulletin, New Mexico crop and livestock product sales in 2023 totaled \$3.99 billion, of which \$3.09 billion is attributed to livestock products. The number one cash commodity for the state was cattle and calves, followed by milk. In 2024, cattle and calves totaled 1.3 million head and are valued at \$1.86 billion.

New Mexico has a shortage of veterinarians who treat livestock and poultry, especially in rural areas. This shortage heightens concerns for a number of risks, including food safety threats, animal disease outbreaks, the potential risk of zoonotic diseases, and decreasing rural economic growth.

Much of the decline in food animal veterinarians stems from a significant increase in education debt obtained by veterinary students, which has outpaced their potential earnings. Because veterinary medical school requires a significant financial commitment, with the total cost of attending often totaling \$200 thousand or more, recent graduates often choose to establish practices in populated urban areas and treat small animals in order to pay off student loan debt.

## **CONFLICT, DUPLICATION, COMPANIONSHIP, RELATIONSHIP**

HB90 substantively duplicates Senate Bill 8 with a nonsubstantive difference in the reversion language; HB90 states that unexpended or unencumbered funds remaining “at the end of a fiscal year shall not revert to *the general fund*” while SB8 states that unexpended or unencumbered funds remaining “at the end of a fiscal year shall not revert to *any other fund*.”
