

Teton Financial Membership Series: Gallup Studio Complex & Jones Wellness Center

Knifewing Segura, Knifewing Studios & Native Stars Studios are developing their first indigenous Gallup film studio. In conjunction they're building a wellness campus, which will include pain management, gerontology, stem cells and other value propositions outside of the traditional areas of AMA / FDA. With tribally-owned corporate land¹, there will be cultivation areas to support organic vegetables and flowers for a healthy array of health & wellness services and experiences.

Native Stars properties are managed through the Teton Community Managers' Office, which was initially formed to provide risk retention, private placement life and related financial regulatory support and commercial entities. Over time, that footprint has grown into the Teton Alternative Dispute Resolution Service, that provides professional services that include:

¹ Not reservation land. This land is owned by tribal corporations and deemed tribal, as opposed to federal or state for most purposes.

- Legal education through Teton-affiliates Haven University (accredited, formerly California Graduate School of Theology), a tribal bar association system²
- A full judiciary system with sitting judges from tribal nations, legislative research and code drafting resources to support various tribal councils (now the Teton Community Managers' Office).

On an elective basis, many of the tribes that we work with have the option to use our Community Managers' Office to provide financial regulatory authority and management for their Risk Retention groups, private life insurance entities, surety and bonding companies, real estate development and other complex systems over and above their traditional criminal, family and other areas for local government and management.

ACADEMIC OFFERINGS

Haven.edu will provide teaching elements, which will involve our Business School certificates, Law, IT & Computers, Media & Communications, Health & Wellness and other certificate and degree programs. These courses will help develop students' research, forecast, supply chain, human resources, marketing and other business skills to expand their mastery over logistics and project management.

IT & Computers

Teton's IT & Computer Science School grew out of Pervasys and Digital Video Broadcast Systems with AI / Robotics Engineer John Sokol as its Chief Technology Officer. John's innovations have included the original streaming video systems, starting with the Sun Microsystems VOD Christmas card, the first no-download streaming video LiveCam in 1995. John also created the first Symmetrically Distributed Serving Network, guaranteed-throughput Internet protocols, and the first database financial transaction and data basing systems, which essentially became the first Dutch blockchain technologies in the late 1990's.

² Haven is developing educational programs, certificates and accredited degrees for law, health & wellness, IT & computer services, media and communications and other educational objectives on both a vocational and academic basis.

Media & Communications

In association with Native Stars Studio, Teton's affiliation with Haven.edu will branch into the Multilingual Cultural Preservation Foundation, and provide an opportunity for an indigenous version on the Great Courses program, which sets up superior professors, team-teaching programs, and certificate and degree programs available to tribal communities and other marginalized cultures and populations to help communities learn to become self sustainable.

Health & Wellness

Tied to other programs, Teton contemplates solar arrays and organic gardens alongside a Holistic Health & Wellness center, along with an Independent Review Board and Clinical Trials programs to help Indigenous, Naturopathic, Homeopathic, and other non-traditional³ practitioners functioning outside of the traditional big Pharma⁴.

Haven - Teton Independent Review Board

We have been dealing with a number of practitioners outside of the United States as well as those who have practiced very quietly on tribal reservations, and now we can bring these into more readily accessible campuses with Teton oversight⁵ of pathologies with published studies for the purpose of creating an indigenous parallel to the traditional American medical infrastructure.

³ Including non-American Medical Association practitioners

⁴ Including non-Food & Drug Administration ("FDA") pharmaceutical providers

⁵ Which will include both AMA-doctors and non-AMA practitioners, as well as FDA advocated and non-FDA indigenous, homeopathic, naturopathic and non-traditional wellness solutions providers.

Indigenous Land Institute

The Teton Community Managers' Office will be providing real estate licensing and development, construction lending, wellness-oriented licensing, independent review board and clinical trials facilities, as well as ties into other phases of both indigenous national and New Mexico state opportunities. With Teton's affiliation with Native Stars' Multilingual Cultural Preservation Foundation, we are tied into a number of indigenous and secular state assets and resources.

The initial consultants facilitating land planning and development include former Mayors, Planning Commissioners, City Managers and those essential to plan check, bonding and other aspects of real estate development, allowing Teton to pursue greater quality with greater creative license (i.e., tribal community managers as opposed to traditional city management) with increased efficiency and reduced zoning and development cost.

Teton allows for the creation of independent, sustainable communities, based on real estate collateral and security, indigenous governmentally-underwritten IRS 7871 Tribal Regulatory Bonds, which function as CFD / Community Facilities District ~ Indigenous Land Infrastructure Bonds for the development of self-sustaining community development assets.

Haven Law

In parallel, Haven Law provides certificates, law degrees and advanced tax degrees for businesses interested in participating in the legal partnership between companies' need to generate and protect profits and the regulators' need to manage an orderly set of businesses to support our burgeoning tribal economy.

Teton and Haven help our communities to train lawyers, legal researchers, compliance and regulatory personnel and others that will participate in the legal system from the first day of training through their last day of practice, including Law School, Bar Association and Judiciary functions.

Teton offers administrative support for its affiliates, companies and venues, tying business prospects and opportunities to a full administrative network to govern and police its constituent residents, clients, customers and their affiliates.

Native Stars Studios – Pre-Employment Training Program

The initial outreach of Native Stars Studios involves the Multilingual Cultural Preservation Foundation, already tied internationally to the indigenous Maori Tribe of New Zealand and the Mongolian culture, and tied domestically to the Navajo, Zuni, Apache and other New Mexico tribes and pueblos.

Having already translated Star Wars, Fist Full of Dollars and Finding Nemo into the Navajo language and released them on DVD, Native Stars is working with the New Mexico Film Office to innovate a Rosetta Stone Cultural Preservation program, where we will be training a number of indigenous people to become an active partner in New Mexico media development.

GALLUP DOWNTOWN CONFERENCE CENTER

The Gallup Downtown Convention Center has been home to Native Stars Studios' production, talent agency, sound recording, post production and other facilities, as well as host to the Gallup Film Festival and the Gallup UFO Film Festival. Teton and Native Stars are expanding on this activity to become a full service media and promotion group.

Media support, story-telling, marketing, merchandising, advertising and publicity for whatever your brand may be is part of our opportunity to provide a better economic and financial community for you to prosper and develop.

New Mexico Film Office

New Mexico has been very supportive of Media and broadcast materials in Academia.

The ***Pre-Employment Training Program*** allows us to teach local work pools how to work with us in any phase of our training, communications, marketing, advertising, logistics or other on-campus businesses. We plan to be a premiere source of professional and vocational training to lift up local populations with a sustainable, relational economy.

Jones Wellness Center: A beautiful home for a 160-acre wellness center, which will include:

- 1) Pain Management center;
- 2) Gerontology center (Assisted Living, Skilled Nursing, etc.);
- 3) Stem Cell and Innovative Technology;
- 4) Meditative Retreat Center;
- 5) a 55+ Senior Retreat Center with 255 units; and,
- 6) 90 residential units on another 20 acre parcel.

To support the constituents on the Jones Wellness Campus will provide all of the Regulatory, Academic / Medical School, Marketing or Logistics / Business Services for everything. With indigenous corporate, regulatory and infrastructure support for your business, think of the Jones Wellness Facility as your own, private Monaco, where you can pursue business in ways that are more investor friendly than most of our local, county, state and federal government agencies.

The Jones Wellness area is across the street from a Navajo settlement, which will be working with the Teton group generally, and which is already involved specifically with Navajo translations of Star Wars, Finding Nemo and Fistful of Dollars.

In terms of the state of New Mexico, the Jones Wellness area is roughly 15 minutes south of Gallup and 10 miles East of the Arizona state border along the 40 Freeway (which is also known at Historic Route 66)
