

Fiscal impact reports (FIRs) are prepared by the Legislative Finance Committee (LFC) for standing finance committees of the NM Legislature. The LFC does not assume responsibility for the accuracy of these reports if they are used for other purposes.

Current FIRs (in HTML & Adobe PDF formats) are available on the NM Legislative Website (legis.state.nm.us). Adobe PDF versions include all attachments, whereas HTML versions may not. Previously issued FIRs and attachments may be obtained from the LFC in Suite 101 of the State Capitol Building North.

SUMMARY

Synopsis of Bill

Senate Joint Memorial 33 makes a number of findings related to uranium mining sites in New Mexico Indian country at Shiprock and Ambrosia Lake and calls upon the New Mexico congressional delegation to introduce and support legislation providing for testing and monitoring of individual homes and small business sites in a 30 mile radius of Shiprock and Ambrosia Lake uranium mines. Further, the resolution requests this federal legislation to give meaningful notification to residents of the area of eligibility for testing and remediation.

Significant Issues

According to the findings of the resolution, major uranium mining sites were active at Shiprock and Ambrosia Lake, including small “mom and pop” uranium-related businesses. Some of these small operations were not included in the remediation and site clean-up conducted under the federal Uranium Mill Tailings Radiation Control Act of 1978. In addition, notification to individuals of the remediation and site clean-up was minimal. Thus, homes and small businesses in the area may still be contaminated, which poses significant health dangers.

The Department of Indian Affairs writes:

“Many Navajo and non-Navajo residents in the Four Corners area of New Mexico face significant problems stemming from uranium development in the area. Exposure to uranium and tailings may result in long term health effects such as cancer and lung disease. In fact, during the late 1970s Navajo uranium miners and their families began to associate the cases of lung diseases to their work in underground uranium mines in the 1940s-1960s. Medical and environmental data confirmed this association.

“To address the concerns of uranium mines, Congress passed the Mill Tailings Radiation Control Act of 1978 for remediation and site clean up. Then in 1990, Congress passed the Radiation Exposure Compensation Act, providing for compensation to former miners and their survivors who contracted certain cancers and other serious diseases as a result of their exposure to radiation during employment in underground uranium mines during the 1950 and 1960s.”
