

Fiscal impact reports (FIRs) are prepared by the Legislative Finance Committee (LFC) for standing finance committees of the NM Legislature. The LFC does not assume responsibility for the accuracy of these reports if they are used for other purposes.

Current FIRs (in HTML & Adobe PDF formats) are available on the NM Legislative Website (legis.state.nm.us). Adobe PDF versions include all attachments, whereas HTML versions may not. Previously issued FIRs and attachments may be obtained from the LFC in Suite 101 of the State Capitol Building North.

SUMMARY

Synopsis of Bill

Senate bill 347 makes two technical changes. The first change amends the way oil and gas severance tax, oil and gas conservation tax, oil and gas emergency school tax and oil and gas ad valorem production tax are reported by allowing them to be reported on an estimated basis similar to the current method for gross receipts and compensating tax based on an agreed methodology between the taxpayer and the taxation and revenue department (TRD).

The second change includes helium and nonhydrocarbon gas in the definition of “oil and gas tax return” in the Tax Administration Act and Resources Excise Act. This is a technical correction to include these gases in the definitions.

FISCAL IMPLICATIONS

SB347 makes technical adjustments which should not result in additional increases or decreases to tax collections.

SIGNIFICANT ISSUES

TRD:

The proposal in Section 1 of the bill would allow the Department to enter agreements to use estimated gross value for determining tax liability under the Oil and Gas Taxes. The Department already has this authority under the gross receipts and compensating taxes. The oil and gas taxes place enormous information demands on the Department and on taxpayers. Each tax return features hundreds of lines of information, and amendments to each line are common because definitive information on product values is often not available at the time returns are originally due. In addition, taxpayers may not have enough information in their computer systems to trace every barrel of oil to its destination. Allowing agreements to use estimated values will save administrative costs for the Department and will save taxpayers on compliance costs. The taxpayer would propose the valuation method, and the Department would have to agree that the method will result in valuations that are consistent with the definition of taxable value in the statute. A similar approach is currently used by the federal government in their oil and gas royalty programs.

ADMINISTRATIVE IMPLICATIONS

TRD reports that SB347 will make the department more efficient and can be administered with available resources.
